Book review index

Building Maintenance Technology in Tropical Climates, Briffet, C., 183
Construction Quality and Quality Standards: The European Perspective, Atkinson, G., 365
Modern Construction Management (4th edition), Harris, F., McCaffer, R., 366
NIST video tapes and handbooks. Least-Cost Energy Decisions for Buildings, Uncertainty and Risk, Choosing Economic Evaluation Methods, Video Transfers Inc., 462
Project Management: Techniques in Planning and Controlling Construction Projects, Ahuja, H.N., Dozzi, S.P., Abourizk, S.M., 461
Quality Assurance: A Framework To Build On (2nd edition), Hughes, T., Williams, T., 368
The 1995 Accessible Building Product Guide, Salmen, J., Quarve-Peterson, J.,183
Time for Real Improvement: Learning From Best Practice in Japanese Construction R&D, DTI Overseas Science and Technology Expert Mission to Japan, 367

0144–6193 © 1996 E & FN Spon

Construction Management and Economics (1996) **14**, 549–552

Keyword index for Volume 14 (1996)

application, auto-ID, bar coding, 121
artificial neural networks, multiple regression, forecasting, demand, economic indicators, 25
artificial neural networks, information technology, automation, neural systems, intelligence, 427
Australian economy, regression analysis, intrafirm profit, 253
auto-ID, bar coding, application, 121
automation, neural systems, intelligence, artificial neural networks, information technology, 427

backward and forward linkage indicators, output and input multipliers, input-output analysis, construction technology, 319
bar coding, application, auto-ID, 121
bias, risk, cost forecasting, Monte Carlo simulations, 457
bidding strategy, hypothesis testing, probability of underrun/overrun, operating characteristic curve (OCC), Monte Carlo, competitiveness, 505
briefing, clients, naturalistic inquiry, organizational metaphors, 155
budget target, building operation costs, performance indicators, 103
building materials, mine restoration bond, Sri Lanka, social costs, 165
building operation costs, performance indicators, budget target, 103

capital budgeting, portfolio selection, linear programming, 451
car production, technological learning, economies of scale, innovation, manufacturing processes, Japanese industrialized housing, 437
case study, product complexity, process complexity, integration, 467
cash flow, tendering strategies, S-curves, financial planning, risk, 35
cash flows, total project cost, inflation rates, escalation, interest, future values, 497
change of use, technical feasibility, flexibility, offices into flats, conversion, 55
China, construction investment, SEZ, social cost-benefit analysis, FDI, 175
civil engineering, earthworks, expert systems, estimating, 79
claims, cost, contract, planning, estimating, variations, 311
claims, expert systems, computing, scheduling, construction management, construction planning, project control, construction delays, 375
client-generated risks, project consultants, risk assessment, risk management, model validation, 131
clients, naturalistic inquiry, organizational metaphors, briefing, 155
communication, cost planning, quantity surveyors, 395
competitive advantage, engineering consulting industry, multivariate analysis, information technology, 227
competitiveness, bidding strategy, hypothesis testing, probability of underrun/overrun, operating characteristic curve (OCC), Monte Carlo, 505
computing, scheduling, construction management, construction planning, project control, construction delays, claims, expert systems, 375
construction companies, financial ratios, traditional ratios, subjective index, ratio models, 189
construction defects, quality systems, operatives, 353
construction delays, claims, expert systems, computing, scheduling, construction management, construction planning, project control, 375
construction firm, prediction, organizational effectiveness, 341
construction industry, Singapore, government, public policies, quality management, 295
construction investment, SEZ, social cost-benefit analysis, FDI, China, 175
construction management, construction planning, project control, construction delays, claims, expert systems, computing, scheduling, 375
construction planning, time-cost trade-off, critical path method, optimization, 265
construction planning, project control, construction delays, claims, expert systems, computing, scheduling, construction management, 375
construction technology, backward and forward linkage indicators, output and input multipliers, input-output analysis, 319
contract, planning, estimating, variations, claims, cost, 311
contractors, technology transfer, developing countries, joint ventures, 45
conversion, change of use, technical feasibility, flexibility, offices into flats, 55
cost, contract, planning, estimating, variations, claims, 311

0144–6193 © 1996 E & FN Spon

cost control, cost-significance, cost modelling, estimating, 241
cost forecasting, Monte Carlo simulations, bias, risk, 457
cost modelling, estimating, cost control, cost-significance, 241
cost planning, quantity surveyors, communication, 395
cost-significance, cost modelling, estimating, cost control, 241
critical path method, optimization, construction planning, timecost trade-off, 265

delay, scheduling, resource allocation, multiproject scheduling, heuristic rules, 325
demand, economic indicators, artificial neural networks, multiple regression, forecasting, 25
developing countries, joint ventures, contractors, technology transfer, 45
development technique selection, knowledge base, KBES, 67
disaggregate systems, project complexity, work flow, production time and cost, 213
domestic, sub-contract, procurement, management, nominated, 93
durability, requirements, performance, refurbishment, service life, 3

earthworks, expert systems, estimating, civil engineering, 79
economic indicators, artificial neural networks, multiple regression, forecasting, demand, 25
economies of scale, innovation, manufacturing processes, Japanese industrialized housing, car production, technological learning, 437
effectiveness, leadership, stress, stress management, site managers, 281
elasticity of substitution, productivity, 535
employee relations, personnel management, human resource management, people management, line management, 405
employee tenure, recruitment sources, Scottish firms, 147
engineering consulting industry, multivariate analysis, information technology, competitive advantage, 227
environment, technology, project management, organizational structures, 199
escalation, interest, future values, cash flows, total project cost, inflation rates, 497
estimating, variations, claims, cost, contract, planning, 311
estimating, cost control, cost-significance, cost modelling, 241
estimating, civil engineering, earthworks, expert systems, 79
expert systems, estimating, civil engineering, earthworks, 79
expert systems, computing, scheduling, construction management, construction planning, project control, construction delays, claims, 375

FDI, China, construction investment, SEZ, social cost-benefit analysis, 175
financial planning, risk, cash flow, tendering strategies, S-curves, 35
financial ratios, traditional ratios, subjective index, ratio models, construction companies, 189
flexibility, offices into flats, conversion, change of use, technical feasibility, 55
forecasting, demand, economic indicators, artificial neural networks, multiple regression, 25
future values, cash flows, total project cost, inflation rates, escalation, interest, 497

government, public policies, quality management, construction industry, Singapore, 295

heuristic rules, delay, scheduling, resource allocation, multiproject scheduling, 325
housing maintenance, 'mass' ownership, integrated management strategies, 529
human resource management, people management, line management, employee relations, personnel management, 405
hypothesis testing, probability of underrun/overrun, operating characteristic curve (OCC), Monte Carlo, competitiveness, bidding strategy, 505

Indonesia, sectoral analysis, productivity, 13
inflation rates, escalation, interest, future values, cash flows, total project cost, 497
information technology, automation, neural systems, intelligence, artificial neural networks, 427
information technology, competitive advantage, engineering consulting industry, multivariate analysis, 227
innovation, manufacturing processes, Japanese industrialized housing, car production, technological learning, economies of scale, 437
input-output analysis, construction technology, backward and forward linkage indicators, output and input multipliers, 319
integrated management strategies, housing maintenance, 'mass' ownership, 529
integration, case study, product complexity, process complexity, 467
intelligence, artificial neural networks, information technology, automation, neural systems, 427
interest, future values, cash flows, total project cost, inflation rates, escalation, 497

intrafirm profit, Australian economy, regression analysis, 253
Iran, productivity, site operations, 417

Japanese industrialized housing, car production, technological learning, economies of scale, innovation, manufacturing processes, 437
joint ventures, contractors, technology transfer, develonina countries, 45

KBES, development technique selection, knowledge base, 67
knowledge base, KBES, development technique selection, 67

leadership, stress, stress management, site managers, effectiveness, 281
line management, employee relations, personnel management, human resource management, people management, 405
linear programming, capital budgeting, portfolio selection, 451

management, nominated, domestic, sub-contract, procurement, 93
manufacturing processes, Japanese industrialized housing, car production, technological learning, economies of scale, innovation, 437
'mass' ownership, integrated management strategies, housing maintenance, 529
mine restoration bond, Sri Lanka, social costs, building materials, 165
model validation, client-generated risks, project consultants, risk assessment, risk management, 131
Monte Carlo, competitiveness, bidding strategy, hypothesis testing, probability of underrun/overrun, operating characteristic curve (OCC), 505
Monte Carlo simulations, bias, risk, cost forecasting, 457
multiple regression, forecasting, demand, ecoromic indicators, artificial neural networks, 25
multiproject scheduling, heuristic rules, delay, scheduling, resource allocation, 325
multivariate analysis, information technology, competitive advantage, engineering consulting industry, 227

naturalistic inquiry, organizational metaphors, briefing, clients, 155
neural systems, intelligence, artificial neural networks, information technology, automation, 427
nominated, domestic, sub-contract, procurement, management, 93

offices into flats, conversion, change of use, technical feasibility, flexibility, 55
operating characteristic curve (OCC), Monte Carlo, competitiveness, bidding strategy, hypothesis testing, probability of underrun/overrun, 505
operatives, construction defects, quality systems, 353
optimization, construction planning, time-cost trade-off, critical path method, 265
organizational effectiveness, construction firm, prediction, 341
organizational metaphors, briefing, clients, naturalistic inquiry, 155
organizational structures, environment, technology, project management, 199
output and input multipliers, input-output analysis, construction technology, backward and forward linkage indicators, 319

people management, line management, employee relations, personnel management, human resource management, 405
performance, refurbishment, service life, durability, requirements, 3
performance indicators, budget target, building operation costs, 103
personnel management, human resource management, people management, line management, employee relations, 405
planning, estimating, variations, claims, cost, contract, 311
portfolio selection, linear programming, capital budgeting, 451
prediction, organizational effectiveness, construction firm, 341
probability of underrun/overrun, operating characteristic curve (OCC), Monte Carlo, competitiveness, bidding strategy, hypothesis testing, 505
process complexity, integration, case study, product complexity, 467
procurement, management, nominated, domestic, sub-contract, 93
product complexity, process complexity, integration, case study, 467
production time and cost, disaggregate systems, project complexity, work flow, 213
productivity, Indonesia, sectoral analysis, 13
productivity, site operations, Iran, 417
project complexity, work flow, production time and cost, disaggregate systems, 213
project consultants, risk assessment, risk management, model validation, client-generated risks, 13
project control, construction delays, claims, expert systems, computing, scheduling, construction management, construction planning, 375

project management, organizational structures, environment, technology, 199
project management, quality management, quality cost, 485
public policies, quality management, construction industry, Singapore, government, 295

quality cost, project management, quality management, 485
quality management, construction industry, Singapore, government, public policies, 295
quality management, quality cost, project management, 485
quality systems, operatives, construction defects, 353
quantity surveyors, communication, cost planning, 395

ratio models, construction companies, financial ratios, traditional ratios, subjective index, 189
recruitment sources, Scottish firms, employee tenure, 147
refurbishment, service life, durability, requirements, performance, 3
regression analysis, intrafirm profit, Australian economy, 253
requirements, performance, refurbishment, service life, durability, 3
resource allocation, multiproject scheduling, heuristic rules, delay, scheduling, 325
risk, cost forecasting, Monte Carlo simulations, bias, 457
risk, cash flow, tendering strategies, S-curves, financial planning, 35
risk assessment, risk management, model validation, client-generated risks, project consultants, 131
risk management, model validation, client-generated risks, project consultants, risk assessment, 131

S-curves, financial planning, risk, cash flow, tendering strategies, 35
scheduling, resource allocation, multiproject scheduling, heuristic rules, delay, 325
scheduling, construction management, construction planning, project control, construction delays, claims, expert systems, computing, 375
Scottish firms, employee tenure, recruitment sources, 147
sectoral analysis, productivity, Indonesia, 13
service life, durability, requirements, performance, refurbishment, 3
SEZ, social cost-benefit analysis, FDI, China, construction investment, 175
Singapore, government, public policies, quality management, construction industry, 295
site managers, effectiveness, leadership, stress, stress management, 281
site operations, Iran, productivity, 417
social cost-benefit analysis, FDI, China, construction investment, SEZ, 175
social costs, building materials, mine restoration bond, Sri Lanka, 165
Sri Lanka, social costs, building materials, mine restoration bond, 165
stress, stress management, site managers, effectiveness, leadership, 281
stress management, site managers, effectiveness, leadership, stress, 281
sub-contract, procurement, management, nominated, domestic, 93
subjective index, ratio models, construction companies, financial ratios, traditional ratios, 189

technical feasibility, flexibility, offices into flats, conversion, change of use, 55
technological learning, economies of scale, innovation, manufacturing processes, Japanese industrialized housing, car production, 437
technology, project management, organizational structures, environment, 199
technology transfer, developing countries, joint ventures, contractors, 45
tendering strategies, S-curves, financial planning, risk, cash flow, 35
time-cost trade-off, critical path method, optimization, construction planning, 265
total project cost, inflation rates, escalation, interest, future values, cash flows, 497
traditional ratios, subjective index, ratio models, construction companies, financial ratios, 189

variations, claims, cost, contract, planning, estimating, 311

work flow, production time and cost, disaggregate systems, project complexity, 213
